The Santa Barbara Channel is one of the most active geological areas in the world. It is a the "big bend" in the San Andres Fault.

Fracking has been associated with increased seismic activity. Why would you want to risk stimulating an earthquake, and possible Tsunami. In the early 1800s, an earthquake in the Channel caused a Tsunami across the City of Santa Barbara to Carrillo (yes Carrillo - 10 blocks inland).

Fracking is more dangerous offshore than on land. Please consider the potential loss of life and property.
